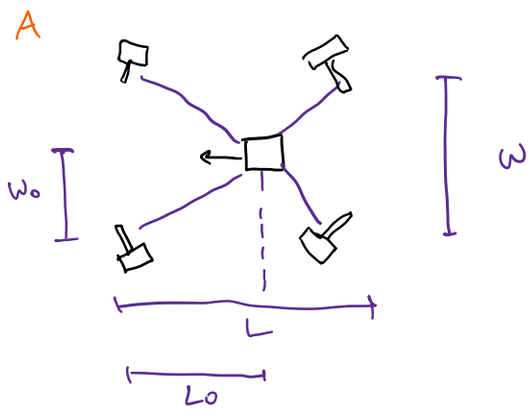
Let counterclockwise turning be direction of 0

clockwise = 1

A



$L1 : \sqrt{L_0^2 + w_0^2}$

$L2 : \sqrt{L_0^2 + (W - w_0)^2}$

$R1 : \sqrt{(L - L_0)^2 + w_0^2}$

$R2 : \sqrt{(L - L_0)^2 + (W - w_0)^2}$

from

$$\frac{\partial \sqrt{(L-x)^2 + \cdots}}{\partial x} = \frac{x - L}{\sqrt{(L-x)^2 + \cdots}}$$

$$\frac{\partial \sqrt{x^2 + \cdots}}{\partial x} = \frac{x}{\sqrt{x^2 + \cdots}}$$

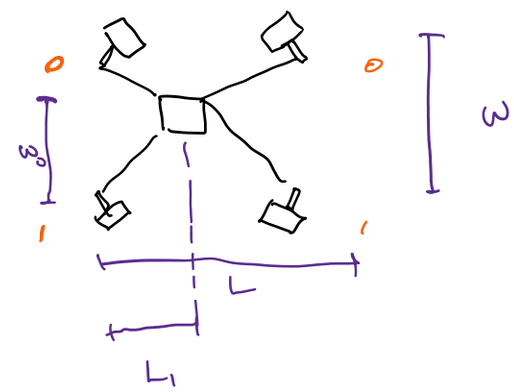
if $\frac{dx}{dt} = \alpha$

motor speed of

$$\frac{\partial L_1}{\partial t} = \left(\frac{\partial L_1}{\partial x}\right)\left(\frac{\partial x}{\partial t}\right)^{(?)} =$$

R1 →

R2 →



$$\Delta L_1 = \sqrt{L_0^2 + w_0^2} - \sqrt{L_1^2 + w_0^2}$$

. . .
